(57) **ABSTRACT**

A protective golf cart bag strap sleeve system which includes a sleeve and a golf cart bag strap, wherein the sleeve comprises a first layer of durable material; a second layer of padding; and a third layer of durable material, wherein the first layer, the second layer, and the third layer are folded over to form a folded edge, wherein the first layer, the second layer, and the third layer are fastened opposite the folded edge to form a sleeve having a first open end and a second open end, wherein the sleeve receives the golf cart bag strap between the first open end and the second open end of the sleeve.

**GOLF CART BAG STRAP SLEEVE****CROSS-REFERENCE TO RELATED APPLICATIONS**

This application is a continuation of, and claims the benefit of, U.S. patent application Ser. No. 13/910,724, filed on Jun. 5, 2013 and entitled "Golf Cart Bag Strap Sleeve," which is a continuation-in-part of U.S. application Ser. No. 12/855,122, filed on Aug. 12, 2010, now U.S. Pat. No. 8,474,671, issued on Jul. 2, 2013, entitled "Golf Cart Bag Strap Sleeve." The disclosure said applications is incorporated herein by reference.

**STATEMENT REGARDING FEDERALLY SPONSORED RESEARCH OR DEVELOPMENT**

Not applicable

**BACKGROUND OF THE INVENTION****1. Field of the Invention**

The present invention relates to golf cart bag straps, and in particular, to a padded sleeve for such straps.

**2. Brief Description of the Related Art**

One of the essential features of a golf cart is the bag rack on the back on the cart. Golf cart bag racks are well-known in the prior art. U.S. Pat. No. 2,822,969 to Cooper teaches a golf cart rack with retaining straps that thread through a buckle to secure the golf bag to the golf cart. Likewise, U.S. Pat. No. 4,533,013 to Hightower teaches a motorized golf cart with straps that encircle the upper portion of the golf bag that are received by a buckle to secure the bag to the golf cart. On modern golf carts, the strap and buckle system is still used. The most common straps are made of hard woven nylon.

It has been seen by the inventor that the friction between the hard woven nylon strap and the golf bag causes physical damage to the bag during transport. It would therefore be desirable to develop a padded sleeve that is durable, easily attached and removed from the golf cart bag strap, and is capable of protecting the golf bag from wear and tear due to friction between the strap and the golf bag. The limitations of the prior art are overcome by the present invention as described below.

**BRIEF SUMMARY OF THE INVENTION**

The present invention is directed to a golf cart bag strap sleeve that is capable of protecting a golf bag from damage due to friction between the strap and the golf bag.

The invention is directed to a golf cart strap sleeve comprising three layers of material, wherein the first and third layers are a durable non-abrasive material suitable for customized advertising and protect the second layer from damage caused by friction due to vibration, and the second layer is made of shock absorbent material such as foam rubber, gel, neoprene, heavy cloth, or any other material suitable for protection against damage caused by friction due to vibration.

It is therefore an object of the present invention to provide for a golf cart bag strap sleeve that is padded and thus will not damage the golf bag when in contact. It is a further object of the present invention to provide for a golf cart strap sleeve that is durable and easily attachable and removable from the golf cart bag strap.

These and other features, objects and advantages of the present invention will become better understood from a consideration of the following detailed description of the pre-

2

ferred embodiments and appended claims in conjunction with the drawings as described following:

**BRIEF DESCRIPTION OF THE SEVERAL VIEWS OF THE DRAWINGS**

FIG. 1 is a perspective view of the first preferred embodiment of the golf cart bag strap sleeve.

FIG. 2 is a cross-sectional view taken along the line of 2-2 of FIG. 1.

FIG. 3 is a elevational view of a golf cart bearing the golf cart bag strap sleeve.

FIG. 4 is a perspective view of the second preferred embodiment of the golf cart bag strap sleeve.

FIG. 5 is a perspective view of the third preferred embodiment of the golf cart bag strap sleeve.

**DETAILED DESCRIPTION OF THE INVENTION**

With reference to FIGS. 1-5, the preferred embodiments of the present invention may be described. Golf cart bag strap sleeve 10 is comprised of three layers: first layer 12, second layer 14, and third layer 16. First layer 12 and third layer 16 are made of a durable non-abrasive material suitable for customized advertising, such as nylon, Lycra, or cotton. These outer layers encapsulate second layer 14, thereby protecting both the second layer 14 and the golf bag from damage due to friction damage caused by vibration. Also, first layer 12 and third layer 16 serve as a canvas for promoting advertising such as the product name, sponsors, or a customer preference.

The second layer 14 is comprised of shock absorbent material such as foam rubber, gel, neoprene or heavy cloth, or other materials that are well-known to those skilled in the art. Second layer 14 lies between first layer 12 and third layer 16. All three layers extend across the entire length and width of the sleeve 10. The second layer 14 is preferably 3-5 mm in thickness.

In the first preferred embodiment, the sleeve 10 is formed by folding said first layer 12, said second layer 14, and said third layer 16 along their middle to form first common edge 18 and second common edge 20. The sleeve 10 has a folded front panel 22 and folded back panel 24 and also has a first open end 26 and a second open end 28. First layer 12, second layer 14, and third layer 16 are received at first common edge 18 by end cover 30. End cover 30 is made of the same material as first layer 12 and third layer 16 to give the sleeve a common and consistent look and feel. End cover 30 prevents the edges of the three layers from fraying and maintains the structural integrity of the sleeve 10. End covers 30 also receive first layer 12, second layer 14, and third layer 16 at the first open end 26 of the front panel 22, the first open end 26 of the back panel 24, the second open end 28 of the front panel 22, and the second open end 28 of the back panel 24. Stitching 32 secures first layer 12, second layer 14, third layer 16, and end cover 30. As an alternative to stitching, the three layers and the end cover can be fastened along the first common edge 18 by other means that would be well-known to those skilled in the art such as Velcro, buttons, zipper, or snaps. Grommet 34 and hook 36 can be used to clip the sleeve 10 onto a golf bag when the sleeve is not in used.

In the second preferred embodiment, the sleeve 10 is not formed by folding over first layer 12, second layer 14, and third layer 16. Instead, as shown in FIG. 4, sleeve 10 is formed by fastening a separate front panel 38 and a separate back panel 40, each panel comprised of the first layer 12, second layer 14, and third layer 16. In this embodiment, end covers 30 receive the three layers along both of their lengths. The

3

separate front panel 38, separate back panel 40, and end covers 30 are fastened to each other by stitching 32 or by other means well-known to those skilled in art such as Velcro, buttons, zipper, or snaps.

Like in the first embodiment, the sleeve 10 of the third preferred embodiment as shown in FIG. 5 is formed by folding the first layer 12, the second layer 14, and the third layer 16 along their middle to form first common edge 18 and second common edge 20. The sleeve 10 has a folded front panel 22 and folded back panel 24 and also has a first open end 26 and a second open end 28. Stitching secures first layer 12, second layer 14, and third layer 16 at first common edge 18. An adhesive may also be used to fasten the first layer 12, second layer 14, and third layer 16 together prior to stitching. End covers 30 receive first layer 12, second layer 14, and third layer 16 at the first open end 26 of the front panel 22, the first open end 26 of the back panel 24, the second open end 28 of the front panel 22, and the second open end 28 of the back panel 24. End cover 30 is made of the same material as first layer 12 and third layer 16 to give the sleeve a common and consistent look and feel. End cover 30 prevents the edges of the three layers from fraying and maintains the structural integrity of the sleeve 10. Grommet 34 and hook 36 can be used to clip the sleeve 10 onto a golf bag when the sleeve is not in used.

The golf cart strap sleeve is easily attachable and removable. As shown in FIG. 3, the distal end of the golf cart bag strap 42 engages the first open end 26 of the sleeve 10. The strap is easily slidable through the first open end 26 and the second open end 28. Once the strap is completely received by the sleeve 10, the distal end of the strap is inserted into the buckle of the bag rack of the golf cart. The buckle is then closed and the golf bag is thus secure. To remove the sleeve 10, the buckle is opened and the strap is removed from the buckle. The user of the sleeve is then able to pull the sleeve 10 off of the distal end of the strap. The sleeve is sized to snugly receive the entire length of the golf cart bag strap 42 that would be exposed to the golf bag.

The present invention has been described with reference to certain preferred and alternative embodiments that are intended to be exemplary only and not limiting to the full scope of the present invention as set forth in the appended claims.

What is claimed is:

1. A method of securing a golf bag to a golf cart using a golf cart bag strap covering system, wherein said golf cart bag strap covering system comprises a golf cart bag strap and a covering, said method comprising the steps of:

- (a) positioning a golf bag on a bag rack of a golf cart;
- (b) inserting a first end of said golf cart bag strap through said covering having a first opening and a second opening, wherein a second end of said golf cart bag strap is attached to said golf cart, wherein a portion of said golf

4

cart bag strap is positioned between said first opening and said second opening, wherein a majority of said portion of said golf cart bag strap positioned between said first opening and said second opening is covered by said covering; and

- (c) releasably attaching said first end of said golf cart bag strap to said golf cart, thereby securing said golf bag to said golf cart.

2. The method of claim 1, further comprising the step of removing said golf cart bag strap from said covering.

3. The method of claim 1, wherein, prior to the step of releasably attaching said first end of said golf cart bag strap to said golf cart, said golf cart bag strap and said covering are pulled across a front surface of said golf bag.

4. The method of claim 1, wherein the step of releasably attaching said first end of said golf cart bag strap to said golf cart comprises the step of inserting said first end of said golf cart bag strap in a buckle of said bag rack.

5. The method of claim 4, further comprising the step of closing said buckle.

6. The method of claim 5, further comprising the step of opening said buckle.

7. The method of claim 1, wherein said covering is a padded sleeve.

8. The method of claim 1, wherein said covering is separate from said golf bag.

9. The method of claim 4, wherein said second end of said golf cart bag strap is attached to said golf cart opposite said buckle of said bag rack.

10. A method of securing a golf bag to a golf cart using a golf cart bag strap covering system, wherein said golf cart bag strap covering system comprises a golf cart bag strap and a covering, wherein said covering comprises a first opening and a second opening, said method comprising the steps of:

- (a) positioning a golf bag on a golf cart, wherein said golf cart comprises a said golf cart bag strap having a first end and a second end;
- (b) covering a portion of said golf cart bag strap extending between said first end and said second end with said covering, wherein a majority of said golf cart bag strap positioned between said first opening and said second opening of said covering is covered by said covering; and
- (c) securing said golf bag to said golf cart.

11. The method of claim 10, wherein said covering is a padded sleeve.

12. The method of claim 10, wherein said covering is separate from said golf bag.

13. The method of claim 10, wherein said golf cart further comprises a bag rack, wherein said second end of said golf cart bag strap is attached to said golf cart opposite said first end of said golf cart bag strap.
